

Control system of an actuator for the actuation of  
submarine devices

5

ABSTRACT

Electronic control system for a submarine actuator,  
said actuator comprising a container body, from which  
a drive shaft projects that is suitable for inserting  
10 in a seat of said submarine device. The system  
comprises an electronic control board for at least  
one electric motor arranged inside said container  
body suitable for moving said drive shaft.
